

# NOC & Control

Proactive network operations, diagnostics and evidence — before users complain.

For WLAN, NAC and service assurance across distributed sites.

## Use cases

- Proactive issue detection
- Cross-site operational visibility
- Service assurance validation
- User experience monitoring

## Deployment

- Cloud-delivered
- No heavy infrastructure
- Fast to deploy
- Enterprise-grade security

## Reports & troubleshooting

- Root cause analysis
- Time-correlated evidence
- Exportable reports
- Audit-ready records

# What the NOC actually sees

From the first weak signal to the final root cause, Meilleur Control connects infrastructure evidence, service validation and operational context in one workflow.

## 1 Typical issues we catch early

DNS works locally, but the RADIUS host in Miami is not resolvable on the DNS server in Rio.

Guest access suddenly fails because the shared password has expired.

APs cannot reach the cloud because firewall SSL inspection blocks onboarding and telemetry.

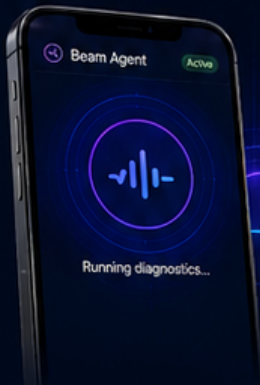

A damaged cable creates unstable DHCP behavior, random disconnects and intermittent application drops.

Users report a problem only later — the evidence trail still shows what happened.

## 2 Beam Agent + Companion App

- ✓ Run diagnostics directly at the client edge.
- ✓ Collect DNS, gateway, NTP and path evidence where the issue occurs.
- ✓ Validate wireless, NAC and service workflows without guesswork.
- ✓ Turn local findings into shareable operational evidence.

## 3 Delivery options

On-premises or private-cloud deployment

Tenant-safe architecture

Distributed site coverage

Fast rollout with low operational overhead

## 4 Outputs

Issue reports

Full executive reports

Evidence timelines

AP, client and service context
